

March 10, 2011 at 7:30pm: **Reef-Building Corals**

A free outdoor presentation by UT's
Sarah Davies & Carly Kenkel

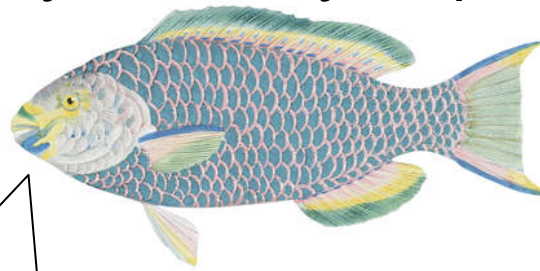

UT biologists team up to answer your most burning questions
regarding corals and the ecosystem they help create and support...

What exactly is a coral?
Why is coral bleaching
in the news?

And what is bleaching,
by the way?
Should I care?

Join us for a riveting exploration
into coral biology, current threats
facing corals, insights from
current research, and of course,
gratuitous photos and videos of
awesome coral reef events!

Science Under the Stars events are free, open to the public and held at 7:30pm
at the Brackenridge Field Laboratory (2907 Lake Austin Blvd.)

In the case of inclement weather, lectures will be moved indoors. For more info, email
scienceunderthestars@gmail.com, and/or see www.biosci.edu/ib/ScienceUnderStars
