# BIOMIMICRY

A free outdoor presentation by UT's Emily Royall

Nature has produced forms most beautiful and, in turn, humans have managed to mimic these forms. In the emerging field of biomimetics, human engineers find inspiration within natural structures, such as the wings of a bird or the complex surface of a cell.

All lectures in this series are free, open to the public, and held at 7:30pm **at the Brackenridge Field Laboratory**, 2907 Lake Austin Blvd.

In the case of inclement weather, lectures will be moved indoors. for more info, email [scienceunderthestars@gmail.com](mailto:scienceunderthestars@gmail.com), and/or see [www.biosci.edu/ib/ScienceUnderStars](http://www.biosci.edu/ib/ScienceUnderStars)
